# JTeam Database Project

James Van Horn - jvanhor6@uncc.edu

Michael McGee - mmcgee26@uncc.edu

Aparajita Pathak - apathak5@uncc.edu

Sunil Bontu - sbontu@uncc.edu

EERD

Business Rules and Assumptions:

1. Person – Intern/Reporter is a generalization-specialization relationship (superclass/subclass)

2. An intern may be simultaneously assigned to multiple stories and thus be part of multiple intern/reporter teams (many to many relationship).

3. A reporter may be simultaneously assigned to multiple stories and thus be part of multiple intern/reporter teams (many to many relationship).

4. An intern may not be the only person assigned to a story.

5. A reporter may be the only person assigned to a story. (A team may consist of only a reporter.)

6. Reporter or intern/reporter team assignments are made to stories.

7. There may be multiple reporters and multiple intern/reporter teams assigned to the same story.

8. There many be a "future queue" of stories. This would be a list of stories for which active reporting has not yet begun, so no team has been assigned.

9. There will be "closed" stories. This would be a list of stories that reporting is complete.

10. Award submissions are made by team by story.

11. Whether an award has been made or not should be tracked.

12. An intern evaluation should contain a hire index in the following range

    1 – No

2 – Potential, but not additional experience required

3 – Consider for a Trainee Reporter position

4 – Consider for Entry Reporter position

5 – Consider for Reporter position

Description of Advanced SQL Features

The advanced SQL feature we implemented was SELECT * FROM to display all the
records and tables in our database.

Executive summary:

This project was completed on mysql workbench as well as generatedata.com. We initialized our project by first going over the client's description of what the database should consist of and the different conditions that needed to be met. It was important that we establish the business assumptions early on in order to know what our constraints would be later on. Our next step was to create the EERD that would help map out our database. We used the EERD to visualize the various tables and attributes we would like to implement. Our EERD helped us create 9 tables which included 3 distinct relationships. We used various cardinalities to illustrate how these relationships mapped out.

Software

We used MySQL Workbench to create the database schema JTEAMDATABASE and used generatedata.com to create inserts into the database in order to make it easier to enter the test data into out database.
